

**Installation instructions for the Light'n'Shade
Louvre Roof System from Gilkicker Ltd.**

Light 'n' Shade

THE OPENING AND CLOSING OUTDOOR ROOF SYSTEM

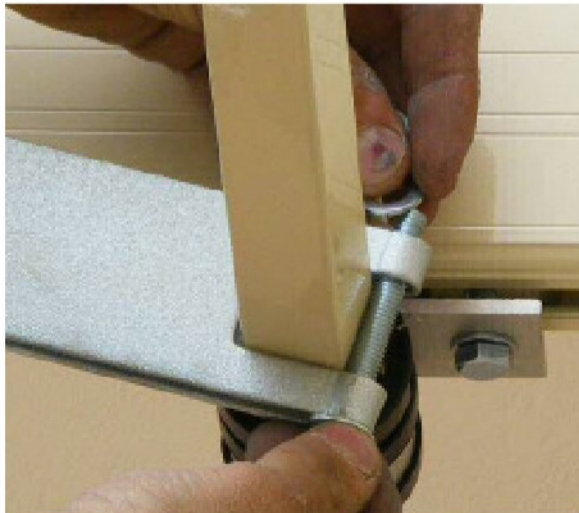

The following instructions should be read in conjunction with viewing the installation video above

1. Cut the notches in the pergola timbers to receive the louvre beams or fit the angle-brackets to drop the louvre beams into: Important – make sure at this stage that the louvre beams are parallel with each other and if using the angle brackets don't fix the self-tapping screws yet, you will see why at stage 4!

2. Site the adjuster mechanism in a position which allows you easy access and ensure that the opening and closing handle will be in a convenient position for you.

6. Fit the opening and closing handle to the opening and closing bar with the bolt provided. Once fitted fully open the louvre clips so they are at 90° to the louvre beams.

7. Slot the louvres into the louvre clips and clip home as shown in the video.

8. Use a normal pair of pliers or footprints to crimp the louvre clip to the louvre as shown.

9. Enjoy the sunshine, shade and *shelter* with Light'n'Shade from Gilkicker Ltd.

Light'n'Shade for the perfect “Inside Out” or “Outside In” experience!
